For immediate release

Now you can gage tools directly on lathes in all axes with the DREHplus 3D-Tester by Tschorn

This analog 3D-tester features innovative, precise probing technology through a patented conical tip specifically designed for measuring tools on lathes saving time and money. No expensive additional equipment is necessary plus the DREHplus is impervious to splash water and oil.

Like all Tschorn testers, the DREHplus is significantly slimmer than the competition through its patented in-line design.

Visit www.3DtesterUSA.com for more information.

Euro-Tech Corporation

The Tschorn DREHplus tester is manufactured in Germany. Euro-Tech Corporation is now the North American distributor of the Tschorn line of 3D testers. We also offer custom and standard engineered products designed to increase production for manufacturers in the automotive, aerospace, small engine, medical, tooling, and machining industries.
