## The Tschorn SLIMplus V2 3D -Tester: because it's better!

Tschorn GmbH presented the new version of their 3D-Tester version 2 (v2) at the EMO (Machine Tool World Exposition) in Hannover in September 2017 under the motto "Because it's better". "Our 3D-Tester has been on the market since 2012 and it was time for a relaunch", explains Ralf Tschorn, general manager of Tschorn GmbH. In development of the v2, Tschorn paid particular attention to customers' needs and requests resulting in a new measuring and probing unit with significantly more precise probing results, with the guide play minimized both in the measuring and in the probing unit. Additionally, the adjustment system has been stabilized; the adjustment is simpler and stability in the automatic tool changer has been optimized. The v2 features a clear scale which simplifies the reading. The probe tips now have a borehole with a provided key for concentricity adjustment. They can be securely fastened making the application safer.
