The Slimmer (*extremely slimmer*) 3D Tester; a sleek workhorse for milling and machining

Euro-Tech Corporation is now the North American distributor of the German manufactured Tschorn line of 3D testers. *Features include:*

- The Tschorn tester is extremely slim in comparison to conventional products
- Tschorn's probe tip is solid carbide vs. ceramic, making for a more robust probe tip.
- Tschorn's probe tip's ball is smaller; only 3mm vs. 4mm
- The solid carbide probe tip never becomes magnetized
- Tschorn's probing unit and measuring unit are separable making for quick, inexpensive repair when necessary
- parallel running i.e. for arranging the vice (also possible in Z-axis!)

Tschorn 3D Testers offers precise and versatile capabilities enabling fast and easy calculation of work piece reference points and lengths. Probing is possible in all axes direction (X/Y/Z) at the same indicator resolution. As soon as the indicator is at '0', the vertical axis is exactly on the edge of the work piece.

The **Tschorn 3D Tester** offers you an alternative choice to consider over models currently available in the US and Canada. For more information visit www.3DtesterUSA.com

Euro-Tech Corporation

Euro-Tech offers custom and standard engineered products designed to increase production for manufacturers in the automotive, aerospace, small engine, medical and machining industries. The company is headquartered in Menomonee Falls, Wisconsin where a highly skilled team is committed to the continuous development of state-of-the-art solutions.
